Hi Brad,  
 Were you able to make any plume maps?  
 If you could send something even as a draft this morning that would be great.  
 Monday was a federal holiday, btw.  
 Thanks.  
 Carolyn

Thank you Carolyn and sorry for the delayed response. We were out of the office all day today (in Franklin) and will try to work up some iso maps tomorrow or Friday. I will then send them to you for your use. Based on the data collected during the offsite groundwater investigation, it appears that the dissolved VOCs associated with the site have been adequately delineated to MCLs.

I am not sure about your availability or Joe's availability, but we could be available for a teleconference Friday AM or any time on Monday. Monday likely works best since that would allow us time to generate the iso maps and get them to you for use during the teleconference. We are also available on Tuesday if that works better.

Sincerely,

Bradley E. Gentry, LPG

Hi –

Would you please –

- 1) prepare a GW plume map based on the recent and earlier sampling results that indicates the areas where the plume is not yet defined? Isoconcentration figures should also be prepared for TCE and PCE.
- 2) propose additional sampling locations for plume delineation (whether the secondary locations will be used or more secondary locations are needed)

Following plume delineation, recommended locations for permanent monitoring wells should be proposed.

We need to arrange a teleconference to discuss GW as well as a work plan to evaluate current on-Site conditions. Please provide some dates and times when you are available in the near-term.

Thanks.  
Carolyn

Attempt 2...

Carolyn,

The Draft Off-Site Groundwater Analytical Results tables are attached to this email. All results have been validated. I have added some symbols to a few of the results which were considered "estimated" based on the review by the validation company.

Please let me know if you have any questions.

Sincerely,  
Chris
